

Digital Retinal Imaging

Dear Patient,

Our office offers and recommends retinal photo imaging which takes a high definition picture of the retina which is instrumental to vision. The Doctor strongly recommends that all patients have this procedure, especially after the age of 40. It is especially important for people with diabetes, cholesterol issues, high blood pressure, headaches and those active in sports. Also if there is eye disease in your family history it is recommended.

Glaucoma, macular degeneration, and many more sight threatening vision ailments which begin slowly and worsen over time may be detected and treated sooner with these new diagnostic tests. Vision insurance recommends this for a typical copay of \$35. Our office offers this for \$20.
